#### Installation

Before using the hoist, make sure all electrical components have no corrosion or damaged; the environment should be clear and dry.

Hoist mounting

Eight (8) M12 x 30L 8.8 grade with 76 N-m torque settings (maximum) high tensile steel bolts must be used in order to sustain the loads imposed on the winch mounting.

#### ► Wire Rope Replacement

- Feed the end of the wire rope into No. 1 anchor hole in the drum and wind about 1/4 wrap of rope on the drum. Insert the wire rope into No. 2 hole and tighten the set screw securely.
- Make sure the first layer of wire rope is tight and maintain a freeboard at least 1.5 x rope diameter.
- · Wire rope shall be wound in an under-wound orientation only.
- To compensate for uneven spooling and the decrease in line pull capacity as the drum fills up, use as short a wire rope as practical.

#### ► Wiring Diagram

- Connect positive/negative terminal cables to the winch motor.
- Attach the ground lead firmly to the negative (–) battery terminal and power lead to the positive (+) battery terminal. The voltage drop for the winch motor must not exceed 10% of the nominal voltage of 12/24VDC.

#### Nut fastening for motor & contactor

- Holding the lower nut on the stub and fastening the upper nut clockwise.
- The torque setting for nut is 6 N-m / 58 Ib-in. (Terminal material copper)

### <u>Warning</u>

- $\cdot$  The operator shall always work in compliance with the operating instructions.
- $\cdot$  Overload shall be forbidden and overload protection shall be required.
- · Ban on transporting persons and excessive inching shall be avoided.
- $\cdot$  Don't try to move obstructed loads and side-pull of load is not allowed
- The rope winding on the drum shall remain 5 wraps from the drum.
